About

(i)

**Dependence:-**  $\Rightarrow$  requirements

Dependency is a piece of code or a library that is required by the app to perform a specific tasks or set of tasks.

**Types:**

Internal Dependence

External Dependence

Transitive Dependence

**Example:**

**APIs** A social media app may depend on APIs from facebook or twitter to enable sharing and authentication.

**Pubspec.yaml:** (ii)

Pubspec.yaml is a file used in Flutter and Dart project to manage dependencies and project metadata.

Dependencies

Flutter

Sdk: flutter

## Format:

The `pubspec.yaml` file is written in YAML (YAML Ain't Markup Language) format, which is a human-readable serialization format.

(iii) What is gradle and why we use it how to resolve its errors? (Gradle: android k lia ha)  
=> powerful hota ha.

Gradle is a build that help manage and automate the building, testing, and development of software project.

## use Gradle:

- Manage dependencies and libraries
- Automate building and testing
- Improve project structure and organization.

## Gradle errors:

- Dependency not found
- Build failed
- Gradle sync failed

## Resolve Gradle error:

### Clean and rebuild project:

Invalidate caches and restart android studio.

## Check Gradle Configuration:

Verify Gradle version and configuration.

## Update dependencies: :::

Update dependencies versions and repositories.

**What is APIs?** (Application Programming Interfaces)  
↳ Set of protocol

APIs are sets of rules, protocols, and tools for building software application. They allow different system, services, or application to communicate with each other. exchange data, and perform specific tasks.

## Types of APIs

Web APIs

Operating System APIs

Library APIs :

(v)

## What is Local Storage?

Local storage is a feature that allows mobile app to store data locally on the device.

## Purpose of Local storage?

- Store user data
- Cache data
- offline support
- Improve performance

### Store user data:

Save user preference, settings, and credentials.

### Cache data:

Temporarily store frequently - used data for faster access.

### Offline Support:

Allow apps to functions without internet connectivity.

(vi)

## What is widget?

A widget is a small, self-contained piece of code that performs a specific function or displays information on a website, application or device.

### Types:

- Graphical widget
- Interactive widget
- Functional widget.

(vii)

## What is App Bar?

App Bar also known as Navigation or Toolbar is a graphical control element that provides navigation.
